GREEN DESIGN INDOOR PLANT HIRE

Mini Green Walls and Vertical Gardens

In their July 29th 2009 Technical Clarification The Green Building Council set down the rules for incorporating green walls in their Green Star rating system.

1. it can be done on the basis of net soil surface area, and
2. The total greenery in the project should be equivalently distributed across the NLA.

The second requirement places restrictions on the contribution a green wall can make towards the Green Star points for indoor plants, as Green Walls are fixed in the one location, generally in reception.

Green Design work closely with the Greenwall Company and together have developed a **mini green wall** that has the following advantages:

1. by having a number of these the greenery can be distributed across the NLA
2. They can be rented and moved about in the office, providing flexibility to the client.
3. Can be planted on one side or on both sides of the wall.
4. Are free standing.

Schiavello **Vertical Gardens** are available in many shapes, colours and plant types

GREEN STAR and SUSTAINABILITY

Green Design has a full range of sustainable planters.

We have an Accredited Green Star Professional on our staff

We have experience with Green Star compliance documentation.

We specialize in submitting proposals within your design and Green Star point requirements.
