

WHAT'S NEW

GREEN DESIGN INDOOR PLANT HIRE

Latest trends in indoor plants and planters

Planters are getting taller with vertical lines and plants are becoming more "architectural"

The last two years have seen the introduction of a number of **modern new planters by Green Design**, such as the tall Prestige Square seen above and the tall Parel cylinders below. These planters are made from part recycled materials and are themselves fully recyclable. This range comes on castors if needed.

With the taller planters it often looks better to have shorter plants, such as the Sansevieria above.

More modern planters can be seen on our web site:

www.greendesign.com.au

The advent of the **Green Building Council**, and there recognition that indoor plants add value to an office interior, has resulted in a greater involvement by interior designers in specifying indoor plants and planters. A common way to include plants into the modern sustainable office is shown in the pictures below.

With the shortage of floor space in modern office interiors the vertical garden has become popular. Green Design has experience with a number of systems, such as the Schiavello Vertical Garden shown above, or purpose designed planter walls spanning floors as here.

The pots in the walls are purpose designed and leak and stain proof.

GREEN STAR and SUSTAINABILITY

Green Design has a full range of sustainable planters.

We have an Accredited Green Star Professional on our staff

We have experience with Green Star compliance documentation.

We specialize in submitting proposals within your design and Green Star point requirements.
