

WHAT'S NEW

GREEN DESIGN INDOOR PLANT HIRE

Upside Down Planters and more

They are called Sky Planters, but we call them upside down planters. You will see why from the picture. Best with low water usage plants, as water drips can occur if the plant needs too much water.

Here shown in Russell Investments stunning new offices in King Street Sydney. Interior design carried out by futurespace.

New page on our web site where brochures on new planters can be downloaded by clicking [here](#)

Another new range of planters available from Green Design are the so called **PURE Planters**. Made in Europe and available on forward order.

BENEFITS OF INDOOR PLANTS.—THE LATEST

Professor Margaret Burchett from the U.T.S has concluded a three year study into the benefits of indoor plants in offices. Conclusions were that indoor plants are very efficient at removing VOCs from the office air, and that they can substantially reduce occupants levels of anxiety, fatigue and stress, besides improving the air we breathe.
